DETAILED ACTION

Allowable Subject Matter

Claims 2 – 14 and 16 – 48 are allowed.

Kaitila et al. teaches a piezoelectric resonator comprising a substrate having an opening and a concavity, a vibrating section and opposing upper and lower electrodes and a heat dissipating film but does not teach or suggest the limitations of at least the amended independent claims comprising previously objected to subject matter.

With respect to the newly cited prior art and in particular Dydyk et al. and Ruby et al., Ruby teaches piezoelectric resonator comprising a perimeter reflection system which reflects lost energy back into the resonator (col. 6, lines 26-32) increasing Q (col. 5, lines 6-8) thus appearing to teach away from the present invention where the reflection film of Ruby does not dissipate, e.g. conduct away heat. Similarly the piezoelectric resonator of Dydyk et al. comprises a perimeter compensation conductor where although teaching temperature compensation of the piezoelectric resonating section teaches applying current to the conductor when the temperature of the resonator falls below a predetermined limit and not applying current to the conductor when the temperature of the resonator exceeds a second predetermined limit (col. 8, lines 35-42), thus also appearing to teach away from the present invention where the compensation conductor of Dydyk does not dissipate, e.g. conduct away heat. Further neither Dydyk et al. nor Ruby et al. teach or suggest the limitations of at least the amended independent claims comprising previously objected to subject matter nor would it be obvious to combine the prior art, thus the claims are allowable.
